 July 27<sup>th</sup> 1834 —

General description,

At least ¾ of this township is grand  
 prairie, gently rolling slightly sandy  
 rich & dry. But little timber to be  
 found. South of the Pickamunk and  
 N & N. of Hoquiam river the rush ponds are  
 generally deep & miery. & have doubtless out-  
 -lets, they differ widely from basins. In  
 the latter the water is hot & impure, in  
 the former cold & pure. Instead of banks,  
 the Pickamunk & Hoquiam above their  
 junction, have for several chains on  
 each side ponds or lakes or ponds covered  
 over with sods of cane flag & cat tail grass  
 muskshaw & rushes. The current in both streams

T. 29 N. R. 6 W. 2<sup>nd</sup> Mer. Ind<sup>a</sup>.

is extremely sluggish. No appearance of mill seats to be found on the Kikanink & the only one found on the Proguois is at the Rapids in Sec. 30. In the forks of these streams the prairies & barrens are good & so proportioned as to admit of a dense population. The banks of both streams are mucky & impassible except at the crossing of the Indian trails, Proguois river below the fork is large enough to float an ordinary sized keel or flat-boat. It could not be navigated higher up than the rapids.

Large granite rocks are to be found in the barrens & sand stone chiefly in prairie.

The face of the country may be said to be gently rolling - Prairie mostly 1<sup>st</sup> rate barrens generally 2<sup>d</sup> rate & sandy.

The post set & mounds raised are in strict conformity to general instructions except that the mounds are 4 ft. instead of 2 1/2 ft. high & are made of sod & not earth alone. A. W. Morris Dep. Sur,

I hereby certify that in pursuance of a contract with M. J. Williams Surveyor General of the U.
